

Vlas Trunov

Analytics / Ownership / Delivery

Current location: Armenia, Yerevan | [+374 \(94\) 341410](tel:+37494341410)

vlastrunov@gmail.com | <https://t.me/vlastru> | <https://www.linkedin.com/in/vlastru> | <https://github.com/VlasTru>

Technical skills

- Databases: PostgreSQL, Microsoft SQL, Elasticsearch, MongoDB, MariaDB, GraphDB, ClickHouse, HBase
- Programming languages: R, Python
- Notations: BPMN, UML, IDEF0
- Process mining: Fluxicon Disco, ProM, bupar
- Data visualization: Tableau, Microsoft Power BI, ggplot2, Yandex Datalens
- Integrations: REST, Kafka, RabbitMQ, EDI,
- Project management tools: Atlassian JIRA, GitHub, Microsoft Team Foundation Server, Digital.AI Agility

Business Domains

- Finance (Sber, Raymond James, Amiobank)
- Retail (Costco via Grid Dynamics, Southern Glazer's via Grid Dynamics, MIR)
- HoReCa (Syrve)
- Telecommunications (Nikita, A1 Systems),
- Oil and Gas (Sakhalin Energy via Luxoft),
- Logistics (KPMG and MIR)
- Human Resources (KPMG)
- Industrial Construction (Gama, Glavstroy, RPC Module via IT Key)
- Marketing (Apple via Grid Dynamics, Medialogia via Luxoft)
- Education (Mail.ru and Skolkovo via IT Key)

Education and Certificates

- 1997 - 2002, Moscow Dashkova Humanities Institute; Master's Degree in Translation Studies
- 2016, Luxoft; "BABOK - Introduction to Business Analysis"
- 2016, Luxoft; "BABOK - Business Analysis Planning and Monitoring"
- 2018, EDUCBA, "Software Estimation"
- 2018, edX, "DAT207x - Analyzing and Visualizing Data with Power BI"
- 2019, Udemy, "Neo4j - GraphDB Foundations with Cypher"
- 2019, Datacamp, "SQL for Data Science"
- 2019, Coursera, "Business Analytics for Decision Making"
- 2020, 4Brain, "TRIZ in Practice"
- 2020, Coursera, "Process Mining: Data Science in Action"
- 2020, Datacamp, "Data ENGINEERING for Everyone"
- 2020, Udemy, "Causal Data Science with Directed Acyclic Graphs"
- 2022, Design Thinking Center, "Research Ops - customer research methods and processes"
- 2022, Udacity, "Predictive Analytics for Business Nanodegree"

- 2023, Stepik, “Data Analysis Using R” by Anatoly Karpov
- 2023, DataCamp, “Business Process Analytics in R”
- 2023, DataCamp, “HR Analytics: Predicting Employee Churn in R”
- 2023, LinkedIn, “Being a Good Mentor”
- 2023, LinkedIn, “Communicating with Emotional Intelligence”
- 2023, LinkedIn, “Effective Listening”
- 2023, DataCamp, “Market Basket Analysis”
- 2024, DataCamp, “Hypothesis Testing in R”
- 2024, DataCamp, “Web Scraping in R”
- 2024, DataCamp, “Functional Programming using purrr”
- 2025, DataCamp, “Forecasting Product Demand in R”
- 2025, DataCamp, “Building Web Applications with Shiny in R”

Honors / Awards

- 2017, KPMG BRAVO Award for preparing a Disaster Recovery Plan for KPMG CIS
- 2019, KPMG BRAVO Award for delivering Vacation Approval System in Kazakh branch

Languages

- English - C2
- German - A1
- Russian - Native Speaker

EXPERIENCE

Amiobank; Yerevan

System Analyst,

November/2025 - August/2026

- Pre-approved credits: designed integrations between a credit conveyor and government services and registers: EKENG, NORQ, ACRA.
- Created a performance monitoring Shiny app to monitor process metrics of the credit conveyor (fact vs design) to mitigate possible exceptions.
- Documented a PostgreSQL database for the legacy AML system: >80% coverage.
- Created a scope of improvements to the existing rule-based credit issuing engine: using competitive models and using KS and AUROC to validate and defend the changes.

Syrve; Yerevan

System Analyst

February/2024 - November/2025

Responsibilities as System Analyst:

- Maintained a full requirements lifecycle for an order injection platform that enables restaurants process orders via 3rd party delivery services, e.g. Deliveroo, noon, Careem, etc. Documented solutions “as is” for implementation and support. The platform is planned to replace an existing 3rd-party solution and become Syrve’s own. 4 of over 30 integrations launched. Stack: PHP + Redis with configuration performed through an existing front office application.
- Elicited and formalized requirements for a front office application to support customer demands related to warehousing processes. Stack: PHP + Angular + MariaDB + Redis + ClickHouse.
- Created a data model and a dashboard in Power BI to display key metrics based on customers payments via Mollie – 3rd party payment gateway. Approved by CEO and BDM and deployed in a corporate production environment.
- In December ‘24 created a roadmap for Syrve Analytics as a new monetizable option of subscription. The plan has been communicated to PO’s and KAM’s in UK and MENA and decomposed into actionable items in the backlog.
- Performed over 30 technical interviews from July till November ‘25 to hire two Analysts.

Grid Dynamics; Yerevan

Senior Analyst, Delivery Manager, Data Analyst, Specialization Lead
September/2022 – February/2024

MARS Petcare, Apple, Southern Glazer's Wine and Spirits

Responsibilities as System Analyst:

- Spearheaded project scoping to plan efforts for a longer perspective
- Decomposed stories into tasks, communicated to development (80+ closed tasks) to fulfill commitments with the customer
- Participated in demo sessions and sprint planning

Raymond James

Responsibilities as Delivery Manager:

- Facilitated planning and estimation
- Maintained capacity and continuous reporting
- Mitigated attrition cases (one for an FE developer, 1 for a junior Analyst)
- Managed issues related to on-shore and off-shore team communication: twice increase in focus over the tasks due to optimization of daily "all-hands" meetings.

Costco

Responsibilities as Data Analyst:

- Set up in Adobe Analytics funnels to monitor and detect customer churn, identified activity patterns YoY
- Identified data gaps that impede conversion calculations and/or impede conversion
- Prepared recommendations for the customer (start est. to March '24):
 - Segmentation of products by conversion vs. revenue. (Completed)
 - Extracting limited samples of products and product combinations for a treatment Group
 - Observing changes based on multiple A/B scenarios
 - Performing basket analysis

Responsibilities as Specialization Lead:

- Performed 50+ technical interviews from January over 2023, recognized as Hardcore Interviewer of the month award in March 2023
- Participated in improvements to a skill grading model for Analytics specialization to address gaps between current assessment criteria, project demands, recruitment flow and existing skill tracking tools
- Performed goal setting for members of the discipline (4 BA's and SA's), participated in performance reviews
- Facilitated offline knowledge sharing events

ITKey; MOSCOW

Senior Systems Analyst

Skolkovo Fund

April/2022 – August/2022

Automation of processes related to reviews and provision of grants, commercial advisory and mentorship.

Responsibilities:

- Refined processes common for different subject matter streams providing advisory services
- Elicited, submitted for assessment and delivered requirements to development
- Facilitated architecture design reviews

SberCloud

May/2022 – May/2022

Optimization of message queues running on RabbitMQ in OpenStack.

Responsibilities:

Two alternatives have been prepared and submitted for the customer's assessment:

- through replacing RabbitMQ queues with Apache Kafka and Oslo.messaging API; monitoring with Grafana.
- running scenarios that render errors in RabbitMQ, changing configuration to restart RabbitMQ in such cases and determining optimal load.

Prefabricated Modular Buildings

March/2022 – August/2022

Support for an existing CRM and extend its functionality to cover processes related to financial reporting, production and order assignment.

Responsibilities:

- Prepared requirements to replace a legacy custom-built CRM.
- Prepared drill-down visualizations of sales (from location to manager level). The prototypes were prepared with Tableau and Yandex Datalens and documented to articulate technical and business assumptions to the customer. The solution built with Datalens has been selected for further production.

Luxoft; Moscow, Yuzhno-Sakhalinsk

Senior Systems Analyst

Daimler-Benz

November/2021 – March/2022

Transfer of e-commerce applications from a global to own infrastructure and integration of retail and driver's profile components. Building performance reports over sales data from dealers and service centers .

Responsibilities:

- Created a scorecard on after sales performance by dealers by regions (Power BI, model and visualization).
- Car owners profile: created transition requirements to create local versions of the applications: Car Owner's profile and Online Store.
- Created a description of analytics flow in terms of quality criteria, mode of communication, etc. for a team of 6 analysts. The document has been negotiated and adopted with development and QA teams. Focus on details in Analytics resulted in over a double reduction of backflow of tasks from QA and development.

Technologies:

- JavaScript
- Proprietary Daimler UI framework + Bootstrap
- Power BI

Medialogia

March/2020 – November/2021

Analytics platform to gather information on social groups, professional communities, political trends, etc.

Responsibilities:

- Elicited and decomposed requirements into tasks including new REST integrations with external applications, configuration of DAG's running under Airflow, configuration of performance dashboards in Zabbix, role-based access with respect to row level security, database updates, front-end, etc.
- Facilitated data-driven analytics. Tested business hypotheses against data to find insights (e.g. gender and age structure in families, segmentation by target audiences, etc.)
- Maintained Technical Architecture description;
- Onboarded analysts in the team and provided support to deliver tasks in accordance with quality criteria.

Technologies:

- Apache Spark
- Apache HDFS
- Apache Flume

- Apache Kafka
- Apache Airflow
- Elasticsearch
- ClickHouse
- PostgreSQL
- D3.js
- Bootstrap
- Zabbix
- Grafana (later replaced with Zabbix to monitor system performance and user activities)

Sakhalin Energy

November/2019 – March/2020

Replacing a legacy CRM built over Microsoft Excel and R scripts.

Responsibilities:

Created a complete set of documentation necessary for development: technical requirements, description of reverse engineered algorithms in a legacy CRM and snippets in R to reproduce the existing logic (LNG production, vessel allocation)

Technologies:

- Microsoft Excel
- R

AIM; MOSCOW

Business Analyst (civil contract)

SberCloud

October/2019 – December/2019

- Building an application which allows data scientists to upload data and train their models.
- Elicited requirements and created design and operational documentation for SberCloud:
 - Technical Requirements
 - Support Model
 - Quick Start Guide
 - Implementation Guide for PyTorch and TensorFlow

Mail.ru; Moscow

Technical Writer (civil contract)

NGO “Russia – the Country of Opportunities”

June/2019 – October/2019

Created a complete set of GOST-compliant documentation for a national MOOC platform including 13 integral services: mentorship, assessment and examination, gamification, surveys, etc.

KPMG; Moscow

Business Analyst,

June/2015 – July/2019

Services primarily catering to company’s internal demands: sector budgeting, talent tracking, workplace booking, internal education, engagement management, vacation planning, charity, etc (13 projects).

Responsibilities:

- Maintained internal policies governing central services: Disaster Recovery Plan, Corporate Mobile Device policy, Extended Leave policy, Maternity policy
- Assisted in pre-project studies: assessed resources and costs in liaison with internal development and/or 3rd party vendors to create business cases.
- Created a Disaster Recovery Plan encompassing 120+ applications in liaison with core stakeholders from all practices. The plan mandates types of incidents, including communication, staff management, systems backup and recovery.
- Delivered analytics for short-term projects with limited resources (1 back-end developer, 1 front-end developer, 1 analyst, 0 managers from IT): company budgeting system and workplace booking application have been launched within a 3-month term each.
- Prepared high-level design, software requirements specification, technical architecture, business Impact analysis, personal data passport, support and operations models.
- Provided 3rd line support on incidents related to existing systems.
- Engaged with the Change Management team on internal marketing campaigns to prepare communication plans
- Provided online training for users.
- Engaged in delivery activities up to deployment in production OOB.
- Facilitated UAT activities and communicated feedback to business owners, estimated criticality of findings to triage or deliver new changes to development.

A1 Media; Moscow

Technical Writer

June/2014 – May/2015

- Prepared external and internal documentation for infrastructure platforms operated by mobile network operators (SMS/USSD delivery platform, interactive cell broadcast, push advertising, etc.)

- Prepared documentation for solutions operated by cell providers.
- Prepared marketing materials (news, press releases, product profiles for the corporate website). Updated corporate termbase (wiki).
- Developed training materials (Eliademy).

Nikita; MOSCOW

Technical Writer

December/2013 – June/2014

- Distributed tasks among technical writers in remote offices.
- Created project documentation for mobile content platforms.
- Created presentations and training materials.
- Updated termbase and documentation flow guidelines.
- Liaised with developers of big data solutions (for content delivery statistics) running on Pentaho.

Microsoft RUS; MOSCOW

Technical Writer (civil contract)

May/2013 – December/2013

- Created technical documentation for Sochi 2014 Olympics and Paralympics CMS (12 roles).
- Created training materials for volunteers registered in Sochi 2014 Olympics and Paralympics CMS. Prepare documentation for Sochi 2014 Olympics Integrated Security System.
- Prepared technical requirements for VTB Covenants Accounting System built on Microsoft Sharepoint.

Parallels; MOSCOW

Technical Writer

October/2010 – May/2012

- Prepared documentation for Parallels Operation Automation and Parallels Business Automation - software and hardware provisioning platforms for Internet service providers.
- Created documentation for developers of cloud services: a Hello World application that may be easily wrapped and launched as a SaaS-service on Parallels infrastructure.
- Localized UI (Doxygen) for Russian and English speaking users.

Aladdin R.D. (ex Aladdin Software Security); MOSCOW

Technical Writer

June/2006 – October/2010

- Prepared documents required to submit data security products to GOST certification. Translated technical and operational documentation.

- Assisted in preparation of marketing materials for eSafe family of solutions, eToken and Secret Disk. Maintained corporate wiki.

Gama Tesisleri Imalat Ve Montaj A.S.; Moscow

Procurement Engineer

June/2005 – June/2006

- Translated business documents, operation manuals and POS materials. Acted as an interpreter at negotiations with subcontractors.
- Prepared analytics on construction equipment and materials market.

Freelance Translator, Moscow

June/2004 – June/2005

Translated and designed operation manuals and marketing materials for Shinco, Toshiba Singapore, Sony CIE, Husquarna, Belacolour.

MIR (electronics chain of stores); Moscow

Translator

May/2002 – June/2004

- Translated and composed operation manuals, marketing and business documents.
- Conducted consecutive interpreting at negotiations with financial organizations and logistics partners.
